RAJESH LAKKAM

Java Spring Boot Developer

+91 86397 16311 | Gmail | Linkedin | GitHub | Bengaluru

PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 4.6 years of experience building and migrating enterprise-grade applications using Spring Boot, microservices, and Google Cloud Platform. Proven expertise in event-driven architecture, real-time bi-directional data pipelines, and monolith-to-microservices migrations — delivering high-traffic e-commerce platforms that handle millions of live transactions.

TECHNICAL SKILLS

Backend: Java · Spring · Spring Boot · Pub/Sub · JDBC · MySQL · PostgreSQL · Oracle ATG · REST API Development · JUnit · Mockito · Unit Testing

Cloud & Data: Google Cloud Platform (GCP) · Cloud Pub/Sub · Cloud Dataflow · RabbitMQ

Frontend: Angular · JavaScript · TypeScript · HTML · CSS · Bootstrap · Web Designing

Dev Tools: Git · Maven · Postman · SonarQube · Jenkins · Test Containers

Methodologies: Agile · OOP · Clean Code · Test Driven Development · Continuous Integration

PROFESSIONAL EXPERIENCE

Kognivera

Bengaluru

Senior Software Engineer

May 2024 – Present

Gift Registry Data Migration & Bi-Directional Sync — Senior Java Resource

- Architected and implemented a bi-directional, real-time data synchronization solution to migrate Gift Registry data from Oracle ATG to PostgreSQL, enabling both legacy and new microservices to operate concurrently without data inconsistency.
- Designed a real time data migration strategy using Google Cloud Pub/Sub and Dataflow, ensuring uninterrupted availability of data in both the legacy ATG application and the new Spring Boot microservices platform throughout the transition.
- Built event-driven data pipelines using Google Cloud Dataflow to stream data changes in real time — propagating new records written to PostgreSQL back to Oracle ATG to support legacy dependencies, and vice versa.
- Bridged two heterogeneous database ecosystems (Oracle ATG → PostgreSQL) within a microservices architecture, resolving schema and data-model differences while maintaining referential integrity across both platforms.
- Delivered a live dual-write synchronization framework that ensured any data added or modified in either system — ATG or PostgreSQL — was immediately reflected in the other, with no manual intervention

Liverpool Gift Registry Project — Senior Java Resource

- Worked on the migration of a monolithic Oracle ATG Gift Registry service to a distributed microservices architecture, delivering a core component of a high-traffic e-commerce platform that handles millions of real-time transactions and events.
- Served as the technical bridge between the solution architect and junior developers — translating high-level architectural decisions into actionable tasks, maintaining implementation consistency.
- Engineered the main microservices of the platform from the ground up, designing and implementing RESTful APIs and event-driven communication (Pub/Sub / RabbitMQ) to support high-throughput, low-latency transactional flows.
- Resolved performance bottlenecks at the application layer and ensured the reliability and correctness of all services across development, QA, and production environments at scale.
- Championed code quality and team growth by mentoring junior developers, conducting rigorous pull request reviews, and enforcing clean code and test-driven development practices throughout the project lifecycle.

Infosys
Bengaluru

Systems Engineer
Oct 2022 – May 2024

WFE Migration Project — Java Resource

- Re-engineered a legacy .NET application into Spring Boot microservices, rebuilding core business logic and exposing RESTful APIs integrated with downstream services.
- Achieved 92%-unit test coverage using JUnit and Mockito; used SonarQube for static code analysis and early bug detection.
- Recognized with the Rise Award twice for outstanding project contributions.

Mlivr Application — Angular Resource

- Built responsive Angular UIs and collaborated with backend teams to integrate frontend components with RESTful APIs.
- Diagnosed and resolved UI bugs using browser developer tools.

Infosys
Mysuru

Systems Engineer Trainee
Apr 2022 – Oct 2022

- Completed intensive full-stack training covering Java, DBMS, and Angular; graduated the Foundation Training Program in the High Performer category with 91%.

PERSONAL PROJECTS

Call Blocker – Spam Screening
A Call blocking app to avoid distractions while working

- This was a personal tool I created for myself after getting distracted by many spam calls
- I have tried some apps in play store those do not fit my requirements, then I decide to vibe code one.
- You can check the app here: Call Blocker – Spam Screening.

EDUCATION

Jawaharlal Nehru Technological University
Pulivendula

Bachelor of Technology (B.Tech) — CGPA: 8.51 / 10.0 — First Class with Distinction
Jul 2017 – Jun 2021

- Represented the college at TechFest-2K21 (IIT Bombay) as a ROBOGYAN delegate.
- Digital Coordinator for Yantra-2K19, a National Level Student Technical Symposium.
- Led a team to design and build a Smart Occupancy Management System using Arduino.

CERTIFICATIONS

- Google Cloud Certified Professional Cloud Developer
- Infosys Certified Java Developer
- Infosys Certified Spring Boot Developer
- Microsoft Certified: Azure Fundamentals
- Infosys Certified Angular Developer
- Infosys Certified DevOps Professional (Open Source)
